SUMMARY

Computer Engineering graduate and full-stack developer with hands-on experience building production features for admin dashboards, backend APIs, and data pipelines using React, Node.js, GraphQL, and AWS. Built and shipped features as part of two 6-10 person development teams, working across the stack from database schema to UI. Strong foundation in data structures, algorithms, and software engineering principles, with a fast learning curve on new codebases and tools.

EDUCATION

University of Engineering and Technology, Lahore Dec 2022 – Jun 2026
Bachelor in Computer Engineering Lahore, Pakistan

- Data Structures and Algorithms, Object-Oriented Programming (OOP), Artificial Intelligence, Software Engineering, Database Systems, Operating Systems

EXPERIENCE

Full Stack Intern Oct 2025 – Mar 2026
HydraSoft Remote – USA
714 Inventory Management & Ticket Operations Platform Team of 10
React, JavaScript, GraphQL, DynamoDB, AWS

- Built admin dashboard features — including detail views, tagging, and status tracking — as part of a 10-person development team.
- Integrated purchase order and sales order data into a statistics dashboard, giving end users reporting and analytics visibility they didn't have before.
- Built bulk-action functionality (select-all, status handling, input validation) that streamlined how suggested events were processed.

Ticket Scraper Team of 6
Node.js, JavaScript, React, GraphQL, DynamoDB, AWS

- Built backend APIs for retrieving and filtering ticket marketplace data as part of a 6-person development team, structuring and querying data pipelines.
- Built admin dashboard features that gave end users visibility into ticket listings and pricing information.
- Redesigned database schema and improved queries to make data retrieval faster and more reliable.

PROJECTS

Smart IoT-Based Infant Incubator with AI Monitoring System | Final Year Project, UET Lahore
React.js, Firebase Firestore, Firebase Authentication, Flask

- Built the React.js web dashboard for a low-cost smart neonatal incubator system, enabling real-time monitoring of infant vitals and incubator conditions.
- Developed dashboard views for live sensor readings, historical reports, alerts, live camera feed, and role-based user management for admin, doctor, and parent users.
- Connected the dashboard to Firebase Firestore for real-time data sync, and to Flask backend APIs for authentication and secure data access.

SKILLS

Frontend: React, JavaScript, HTML5, CSS, Tailwind CSS, Material UI
Backend: Node.js, GraphQL, REST API, Flask, Python
Database: MySQL, Amazon DynamoDB, Firebase Firestore
Cloud & Auth: AWS, Firebase Authentication
AI-Assisted Dev Tools: OpenAI Codex, Cursor, Claude

CERTIFICATIONS

Claude Code in Action: View Certificate
AI for Beginners: View Certificate
